

students were not interested in uncooked fish and didn't eat anything. On Wednesday, Eric filled the cafeteria with only lentil pancakes and chickpea curry. Still, few students tried the food. That left the three kids really sad

News of these lunches got around, and parents were worried. Mrs. Wellington called a meeting and parents suggested a mixed lunch to encourage students to try some new foods.

On Friday, parents got dressed in clothes from different countries and made the cafeteria beautiful with colorful flags. There was an international mix of foods. Students enjoyed the food, and one girl even said sorry to Lily for her past mean words.

After that, Eric and his friends learned some lessons. They realized that different people have different tastes for food and that there should be balance in meals. But most importantly, they found that sharing food was a great way to get to understand each other.

44. Why did Eric want to plan a food event?
 - A. To have a party with his friends.
 - B. To let students try different foods.
 - C. To bring students and teachers together.
 - D. To improve the food in the school cafeteria.
45. How did Eric and his friends feel when no one ate the food they prepared?
 - A. Sad.
 - B. Angry.
 - C. Relaxed.
 - D. Shy.
46. What did Eric and his friends learn at the end of the story?
 - A. We should be open-minded about different food cultures.
 - B. We'd better eat the food from our own culture in school.
 - C. Trying one's best works better in building school spirit.
 - D. Teamwork is important for the success of food events.

C

Sleep and exercise work together like gears (齿轮) in a machine. When one works well, the other does too. Good sleep helps you exercise better, while exercise lowers stress and can help you fall asleep faster. However, just as the benefits go hand-in-hand, so does the bad influence. Exercising too much, too late in the day, or too often can **backfire**, making it harder to fall or stay asleep.

There's no question that exercise is mostly good for sleep, but you can't overdo it. Poor sleep is one of the results of overtraining. The benefits of exercise often come from moderate (适度的) activities, like walking, jogging, or cycling. High-intensity (高强度) exercise, on the other hand, like a half-marathon, can do harm to one's sleep. It raises heart rate and blood pressure, which is not good for sleeping. The timing of exercise matters too. A recent study finds that any physical activity after 8 p.m. causes people to sleep less, and another study shows that high-intensity exercise ending one hour before bed may make it harder to fall asleep.

While researchers haven't agreed on the best exercise routine for better sleep, a study advises people to add moderate exercise to other traditional ways to improve sleep. Dr. Kline suggested exercising at the same time every day as well. It's important to be mindful of intensity and timing, pay attention to muscle pain, and find the right balance. If evening exercise leaves you feeling stressed, switch (转换) to mornings or afternoons. If the evening is your only free time, try exercising less and at a lower intensity.

Above all, find the routine that works for you. It can take weeks and months for an exercise habit to lead to better sleep, and the short-term effects can be pretty small. But once you find your routine, the gears will start turning again — you will sleep better after being active, and your workouts will feel easier as you sleep through the night.
